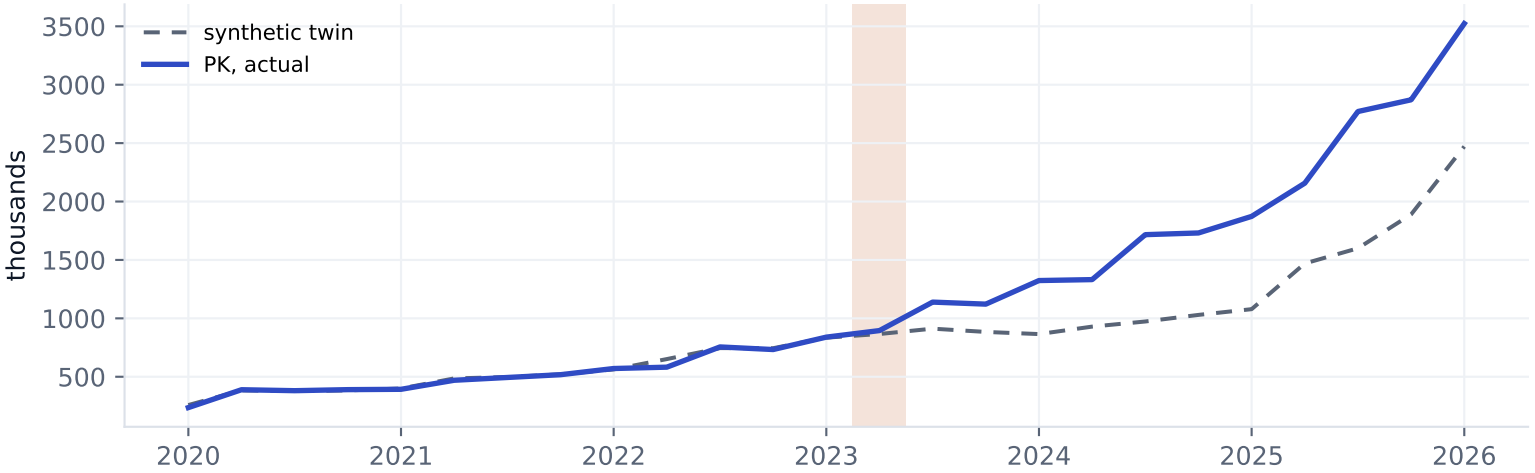
Pakistan, 2023

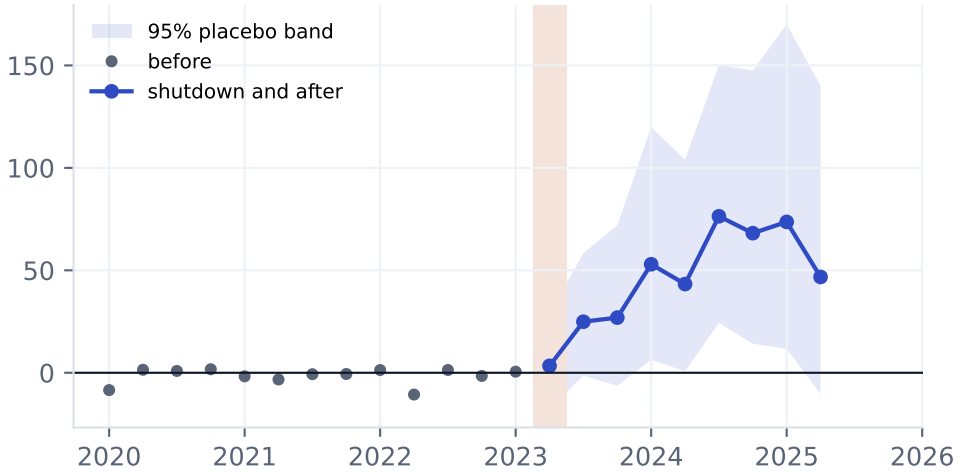
Change in git pushes attributed to PK in 2023Q2 vs a synthetic twin (106 donor economies, 13 pre quarters)

Method	vs twin	95% interval	p normal	p perm
Synthetic DiD	+3.4%	-17% to +29%	0.770	0.738
Synthetic control	+6.9%	-16% to +36%	0.591	0.421
Augmented synthetic control	+8.4%	-15% to +38%	0.515	0.308

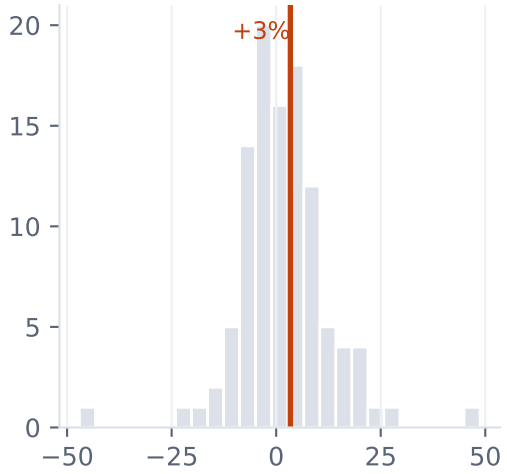
Git pushes per quarter, attributed to PK



Gap to the twin (%)



Same design run on every donor (%)



- Conformal test. p = 0.643. With 14 quarters the smallest possible p is 0.071, so this test can't give an interval here.
- Backdating. Fitting without 2022Q4 and 2023Q1, the twin misses those quarters by +5%, +15%. Inside the placebo band.
- Breakdown. The interval already includes zero, so there is nothing to break.
- Leave one donor out. Dropping each of the 32 donors with weight over 1% keeps the estimate between +2.4% and +5.6%.
- Holm adjusted p across the nine registry events is 1.000. Does not pass every check in the analysis plan, so I don't call it a clear drop.
- What happened. Mobile internet suspended from 9 May 2023, restored 12 May 2023. Fixed line stayed up. Source https://pulse.internetsociety.org/shutdowns/pakistan-blocks-mobile-internet-access-in-some-regions-amidst-protests
